# 1 Search Algorithms

## 1.1 Selection sort

Time Complexity =  $O(n^2)$

Sorts an array by repeatedly selecting the smallest or largest element from the unsorted portion and swapping it with the first unsorted element.

## 1.2 Insertion sort

## 1.3 Bubble sort

## 1.4 Shell sort

## 1.5 Quick sort

## 1.6 Merge sort

## 1.7 Bucket sort

## 1.8 Radix sort

# 2 ArrayList vs. LinkedList

Operation	ArrayList	LinkedList
size()	$O(1)$	$O(1)$
add()	$O(n)^*$	$O(1)$
contains(obj)	$O(n)$	$O(n)$
remove(obj)	$O(n)$	$O(n)$
toArray()	$O(n)$	$O(n)$
indexOf(obj)	$O(n)$	$O(n)$
get(int i)	$O(1)$	$O(n)$
set(int i, E e)	$O(1)$	$O(n)$

- $*O(1)$  in amortized time (when resizing is not needed)

# 3 ArrayList vs. LinkedList (Queue/Stack)

	ArrayList		LinkedList	
	Queue	Stack	Queue	Stack
offer / push	$O(n)$	$O(n)^*$	$O(1)$	$O(1)$
poll / pop	$O(1)$	$O(1)$	$O(1)$	$O(1)$
peek	$O(1)$	$O(1)$	$O(1)$	$O(1)$

- $*O(1)$  in amortized time (when resizing is not needed)

Operation	Time Complexity
add(T element)	$O(n)$
T findMin()	$O(1)$
T removeMin()	$O(1)$

## 4 PriorityQueue

### 4.1 PriorityQueue - SortedList

### 4.2 PriorityQueue - LinkedList

Operation	Time Complexity
add(T element)	$O(1)$
T findMin()	$O(n)$
T removeMin()	$O(n)$

## 5 HashSet vs. TreeSet

Operation	HashSet	TreeSet
add()	$O(1)^*$	$O(\log(n))$
remove()	$O(1)^*$	$O(\log(n))$
contains(obj)	$O(1)^*$	$O(\log(n))$
findMin	$O(n)$	$O(\log(n))$
findMax	$O(n)$	$O(\log(n))$

- \*HashSet har  $O(1)$  i snitt, men  $O(n)$  i worst case

## 6 Heap runtime

Operation	Time Complexity
add(T element)	$O(\log(n))$
T peekMin()	$O(1)$
T removeMin()	$O(\log(n))$
Construct heap	$O(n)$

## 7 Graph Datastructures

### 7.1 Adjacency Set

Metode	Kjøretid
Adjacent	$O(1)^*$
Vertices	$O(1)$
Edges	$O(M)$
Neighbours	$O(1)^*$
AddVertex	$O(1)^*$
AddEdge	$O(1)^*$

### 7.2 Adjacency List

Method	Runtime
Adjacent	$O(\text{degree})$
Vertices	$O(1)$
Edges	$O(M)$
Neighbours	$O(1)^*$
addVertex	$O(N)$
addEdge	$O(\text{degree})$

### 7.3 Adjacency Matrix

Method	Runtime
Adjacent	$O(1)$
Vertices	$O(1)$
Edges	$O(N^2)$
Neighbours	$O(N)$
addVertex	$O(N^2)$ or $O(N)$
addEdge	$O(1)$

## 8 Summary of Graph Algorithms

Algorithm	Graph Type	Time Complexity
BFS	Unweighted	$O(m + n)$
DFS	Unweighted	$O(m + n)$
Dijkstra	Positive weights	$O(m \log m)$
Bellman-Ford	Negative weights, no negative cycle	$O(n \cdot m)$
Brute-Force	Negative weights	$2^{O(n)}$
$A^*$	Weighted	$m \log(n)$
Kruskal's	Weighted	$O(m \log n)$
Prim's	Weighted	$O(m \log n)$
Union-Find		$O(m \log n)^*$

Table 1: Summary of Graph Algorithms
